

CUSTOM PRE-FABRICATED TREES

CUSTOMIZED TO YOUR DESIGN

Whether you have a specific drawing you're trying to recreate, or just a concept in your head, we work closely with you to create the final appearance that you're looking for.

FACTORY FABRICATED

What separates us from many other tree fabricators is the ability to create highly detailed trees that built in-factory. Once completed, they can be shipped to a job site in pieces and reassembled with only minimal work. This process allows us the ability to work with local contractors and keep travel installation costs out of the equation on most projects.

INCREDIBLY REALISTIC BARK

Our whole process starts with our state-of-the art replication of bark textures. Using a unique polyurethane elastomeric material and an innovative production process, we are able to create exact replications of different bark textures in the form of flexible sheets that are used to create the final texture appearance of all of our trees.
